

Boost Flexible Reporting

Expand Your Reporting with Angles and Spreadsheet Server

For mid to large sized businesses, your Finance teams' data needs are complex. Spreadsheet Server solves the core financial/GL reporting piece, but there's still a considerable number of manual processes when it comes to operational reporting which expose organizations to risk. You need an intuitive operational reporting tool that breaks down data silos and enables self-service of critical operational insights.

Traditional business intelligence systems possess all the right features, but don't play well with your financial data. They simply aren't designed to work with your ERP data structures. You need a way out of the disappointing results that add pressure and sap time from your team. You need ERPsmarts.

What's Holding You Back

Your ERP is likely too complex and inflexible to provide the operational reporting and analysis essential to driving fast, agile decision-making across the entire organization.

- **Managing multiple users and multiple tools is time-consuming and costly** — Finance processes are interconnected, yet finance teams typically jump between multiple, unrelated, and disconnected applications to complete their workload—wasting time and duplicating effort. Multiple tools translates to multiple interfaces to learn, multiple tools to administer, and multiple connections to manage the same set of data sources.
- **Generic tools come with long implementation times and no pre-built content that understands your ERP** — Rolling out an unknown and unproven reporting tool that doesn't come with out-of-the-box content and wasn't built to work with your specific ERP often means a long, complex implementation process.
- **Users can't access the data they need, when they need it, and in a format that works for them** — Stakeholders within finance and other business areas lack access to timely, operational data to support day-to-day decision-making. Between manual processing, the volume of recurring reports, and slow distribution, decision-makers need a better way to produce, share, and consume operational reports.

Combine Angles with Spreadsheet Server for Operational Oversight

Your Way Forward:

- **Simplified and centralized account administration** — Because Angles and Spreadsheet server will both live on the insightsoftware platform, combining these solutions will give you a single place to manage your users and allocate licenses, saving you time and effort. The benefits of the platform extend beyond those administering your systems; your users will enjoy a consistent interface, onboarding experience and a central point of access to both Spreadsheet Server and Angles.
- **Low risk and short time to value** — Work with the company you trust for your financial reporting—a company that intimately understands your ERP—Angles allows you to extend the same ERPsmarts you know and love from Spreadsheet Server to solve your operational reporting challenges. Give your team a head start with pre-built content packs, including interactive reports, visualizations, and dashboards purpose-built for your ERP that cover common financial and operational reporting needs. Get up and running immediately with no installation required. Combine ERP data with other sources to view the bigger picture.
- **Accessible operational reporting for the entire organization** — Spreadsheet Server gave you the tool you needed to understand your financial data, with Angles you can now provide all your stakeholders with a tool that does the same for operational data. Angles drag-and-drop editing, rich visualizations and intuitive interactivity allow business users to easily access and refresh their reports at any time so they can explore the latest data to get fast answers to their key questions. Now users can access data in the way that works for them: Finance in Excel, others through their browser.

About insightsoftware
